

F . A . Q . ' s

Q. Will my logo rub off?

A. Yes, all logos will fade with time. No cleaner will guarantee that it won't. Logos are inked on not stamped on.

Q. Will the "Cymbal Polisher" clean up to a 20" ride?

A. The Cymbal Polisher will accept a 10" cymbal to 22" no problem.

Q. Will cleaning my cymbals change the tone?

A. Yes, cleaning your cymbals will make them crisp, clean & clear sounding. Plus look good under stage lights.

Q. Will the "Cymbal Polisher" take off the protective coating on my cymbals?

A. Yes, the coating will come off eventually. Depending on what cleaner you may use.

Q. What cleaner do you recommend?

A. Use whatever cleaner you are comfortable with. Or manufacture recommendation, when you purchase your cymbals.

Q. Will the cymbal come off while it's spinning?

A. No. the motor is turning counter clockwise thus tightening the wing nut as it turns, making it completely safe.

Q. What voltage does the "Cymbal Polisher" use?

A. Standard 110 v. 3 pronged plug.

Q. Will the "Cymbal Polisher" scratch my cymbals?

A. No it won't, use common sense and don't use hard abrasive chemicals with grid; sand paper, etc.

Q. Will cleaning my cymbals regularly, deteriorate and make them weak?

A. No! Cleaning your cymbals will keep the tarnish and oxidation from setting in, that comes from acid sweat, finger prints, and humidity. In turn will eat the alloys that make your cymbals what they are.

If you take care of your cymbals they will last for years to come. They will take care of you, saving you thousands of dollars!!

CYMBAL POLISHER™ INSTRUCTIONS

Please read all instructions & warnings before attempting to use this product.

The Cymbal Polisher® eliminates endless hours of scrubbing, polishing, and straining fingers, wrist, arms, and elbows. Easy application no more black stains on clothes while cleaning.

For years of heavy tarnish and green spots, it's recommended you use spot treatment. Spot treat cymbals with a soft toothbrush with cymbal or brass polish, or presoak your cymbal with your favorite polish.

For tarnished cymbals follow these 10 easy steps:

1. Place the "Cymbal Polisher®" on the ground preferably on the carpet and NOT a slick surface. (For some unbalanced cymbals wobbling may occur.) Place both feet on the platform at the bottom of the Cymbal Polisher® next to the handles.
2. Turn speed control to the "ON" position, the motor will turn fast. Slow the motor down by turning speed control knob clockwise until motor stops completely.
3. Remove wing nut washer and top felt pad ONLY.
4. Place your cymbal onto the Cymbal Polisher® between the two felt pads. Replace washer and wing nut, and tighten to a snug fit.
5. Turn speed control knob counter clockwise slowly, the cymbal will begin to rotate. Adjust speed from Slow to Fast as needed.
6. Turning the speed control half-way on this will provide enough torque.
7. We recommend using "Latex Gloves" and apply your favorite polish onto a cloth.
8. Start with the bell of the cymbal. Place cloth with polish close to the wing nut, and work your way out to the edge in sections. Slowly applying MINIMAL PRESSURE to the cymbal. (Putting too much pressure WILL NOT clean cymbals any faster! DO NOT bog the motor down with too much pressure, this will burn the motor up. Your cloth will turn black with tarnish, turn the cloth as needed, and apply more polish as you turn the cloth. CAUTION: IF the cloth snags on wing nut, let go immediately and turn the Cymbal Polisher® off. Remove the cloth and repeat from step 2.
9. To stop, turn speed control clockwise to slow. Using your cleaning cloth, grab the edge of the cymbal and use it as a break until the cymbal comes to a complete stop.
10. Turn the cymbal over and repeat the process on the bottom side of the cymbal.

WARNINGS:
Keep legs away from rotating cymbals.
CAUTIONS: Keep Out of Reach of Children.
Do NOT use the Cymbal Polisher™ on cracked cymbals.

The Cymbal Polisher™

The **Cymbal Polisher™** is a device that allows all drummers, drum techs, and percussion related businesses and persons to clean and polish cymbals in a quick and easy manner. This device will save considerable amounts of time and effort and would allow -drummers to keep their cymbals looking bright and new. Removing the tarnish with ease, instead of pain staking manual polishing will eliminate considerable stress on hands, wrist, arms, elbows and shoulders. In addition to restoring a cymbal's original luster and shine, the **Cymbal Polisher™** will also restore the original bright sound, as dirt and tarnish within a cymbal's grooves will dull its tone.

The **Cymbal Polisher™** is ideal for drum shops, music stores and drum techs who travel with touring drummers. The device would allow drum shops to offer cymbal-cleaning services for a fee, which would enhance revenues. Making quick work of this typically tedious and difficult task, the device will save critical time, thus allowing individuals to spend time doing other necessary task for their employer.

High school, College and University band directors, Orchestra Group Directors and many other Musical Organizations will also find the **Cymbal Polisher™** to be extremely useful for marching, concert, stage and many other Institutional Bands when performing in front of large crowds, thus displaying bright, shiny and great sounding cymbals for the audience to enjoy.

The Inventor

Albert Martinez, a professional drummer for 30yrs, has invented an easier way to clean and polish your cymbals. No more grueling pain of having to use elbow grease that we all know and love! The tired elbow and sore arms of trying to maintain equal

pressure all around the cymbal. Taking hours of long hard work. The cymbal polisher is universal and will accept all standard 1/2 " holes cymbals, ranging from the smallest to the largest size in diameter. You have a choice of using your favorite brass or cymbal polish.

Simple and easy to use! From dull to shiny in minutes!.
